Fixed zoom out (-)

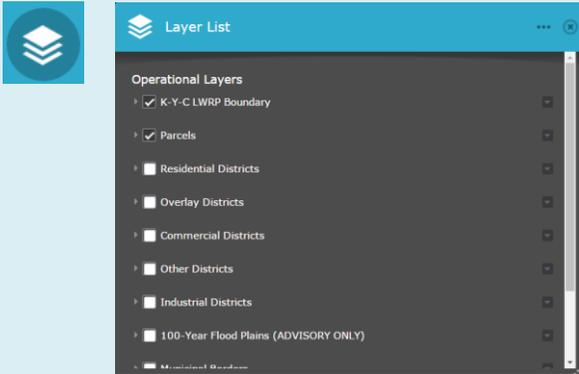

Click and hold mouse to navigate the map

LEGEND

The map legend can be made visible by activating the map legend symbol. To do this, click the symbol and the legend will appear. Note that only layers that have been turned on will be visible in the legend.

LAYER LIST

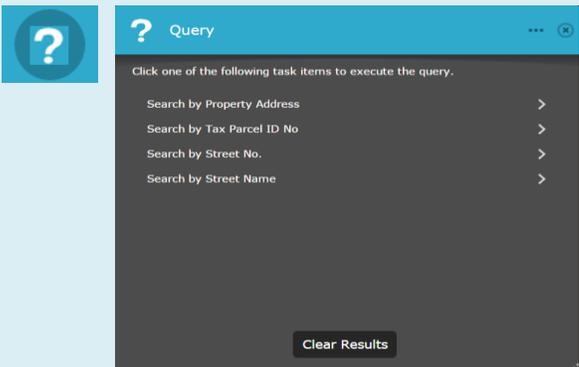

All available layers can be found here. Layers can be turned on or off based on the needs of the user. Only items turned on here can be seen in the legend.

BASEMAP GALLERY

The basemap widget allows users to choose from 12 options.

QUERY

The query widget enables a user to search parcels by address or tax parcel id. Results are listed on the widget and for each result the user can zoom to the result.

QUERY CONVENTIONS

- Search by street name only, no suffixes (Rd., St., Ave., Road, Street, Avenue)
- Spell out West, East, North and South (W. Kendall would be West Kendall)

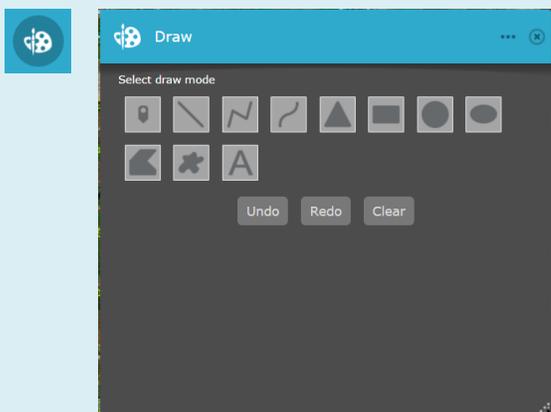

Example: 1304 S. Gravel Rd becomes **1304 South Gravel**

- State highways that are widely referred to in numerical form should be searched using the following format:

Route 31

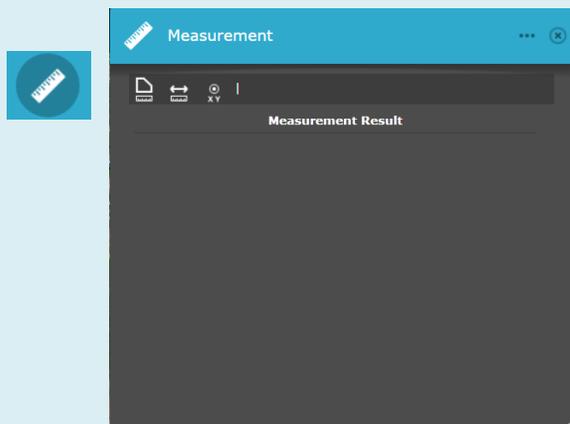

Please note: Some state highways are referred to by alternate names (Ridge Rd / Route 104). Please search using both options, if necessary, to find results.

DRAW TOOL

The draw tool is used to annotate the map with drawings of various colors. These annotations can then be printed using some of the printing tasks.

MEASURE TOOL

The measure tool allows the user to measure a distance on the map as a line or an area. The user can choose the unit in which the measurement is displayed.
